

- 1) You are creating a box with a lid out of $\frac{1}{4}$ " birch plywood. The box is 4 feet by 3 feet and 2 feet tall. The density of birch plywood is 0.021 lbs/in^3 . How much will the finished box weigh?

$$SA = 2(4 \cdot 3) + 2(3 \cdot 2) + 2(4 \cdot 2)$$

$$SA = 24 + 12 + 16$$

$$SA = 52 \text{ ft}^2$$

$$\text{Convert SA to square inches: } 52 \cdot 144 = 7488 \text{ in}^2$$

$$\text{Volume of Material Used for Box} = 7488 \cdot \frac{1}{4} = 1872 \text{ in}^3$$

$$\text{Mass of Material} = 1872 \text{ in}^3 \cdot \frac{0.021 \text{ lbs}}{1 \text{ in}^3} = 39.31 \text{ lbs}$$

- 2) A 55-gallon drum is 33" tall and made out of 18-gauge steel. The diameter of the steel drum is 23.5". 18-gauge steel is 0.05" thick and steel weighs about 490 lbs/ft^3 . What is the weight of the empty drum?

$$SA = 2\pi(11.75)(33) + 2\pi(11.75)^2$$

$$SA = 2436.31 + 867.47$$

$$SA = 3303.78 \text{ in}^2$$

$$\text{Volume of Material Used for Drum} = 3303.78 \cdot 0.05 = 165.19 \text{ in}^3$$

$$\text{Convert Volume to cubic feet: } \frac{165.19}{1728} = 0.096 \text{ ft}^3$$

$$\text{Mass of Material} = 0.096 \text{ ft}^3 \cdot \frac{490 \text{ lbs}}{1 \text{ ft}^3} = 46.8 \text{ lbs}$$

- 3) A plastic drum has a base diameter of 23.3". The drum is 34.8" tall. The plastic is 2.2 mm thick and weighs 51.6 lbs/ft^3 . Find the weight of the empty drum.

$$SA = 2\pi(11.65)(34.8) + 2\pi(11.65)^2$$

$$SA = 2547.33 + 852.77$$

$$SA = 3400.1 \text{ in}^2$$

$$\text{Convert width of material to inches} = 2.2 \text{ mm} \cdot \frac{0.04 \text{ inches}}{1 \text{ mm}} = 0.088 \text{ in}$$

$$\text{Volume of Material Used for Drum} = 3400.1 \cdot 0.088 = 299.21 \text{ in}^3$$

$$\text{Convert Volume to cubic feet: } \frac{299.21}{1728} = 0.173 \text{ ft}^3$$

$$\text{Mass of Material} = 0.173 \text{ ft}^3 \cdot \frac{51.6 \text{ lbs}}{1 \text{ ft}^3} = 8.93 \text{ lbs}$$

- 4) The bag below has been designed to be constructed out of $1/16''$ nylon. Find the weight of the empty bag if nylon has a density of $0.041185 \text{ lbs/in}^3$.

$$SA = 2\pi(6)(24) + 2\pi(6)^2$$

$$SA = 904.78 + 226.19$$

$$SA = 1130.97 \text{ in}^2$$

$$\text{Volume of Material Used for Bag} = 1130.97 \cdot \frac{1}{16} = 70.69 \text{ in}^3$$

$$\text{Mass of Material} = 70.69 \text{ in}^3 \cdot \frac{0.041185 \text{ lbs}}{1 \text{ in}^3} = 2.91 \text{ lbs}$$

- 5) The box below is to be constructed out of $1/8''$ aluminum. Aluminum has a density of 2.7 g/cm^3 . Find the weight of the empty box.

$$SA = 2(15 \cdot 15) + 2(48 \cdot 15) + 2(48 \cdot 15)$$

$$SA = 450 + 1440 + 1440$$

$$SA = 3330 \text{ in}^2$$

$$\text{Volume of Material Used for Box} = 3330 \cdot \frac{1}{8} = 416.25 \text{ in}^3$$

$$\text{Convert Volume to cubic feet: } \frac{416.25}{1728} = 0.2409 \text{ ft}^3$$

$$\text{Convert Density to lbs/ft}^3: \frac{2.7 \text{ g}}{\text{cm}^3} \cdot \frac{0.0022 \text{ lb}}{1 \text{ g}} \cdot \frac{1 \text{ cm}^3}{0.061 \text{ in}^3} \cdot \frac{1728 \text{ in}^3}{1 \text{ ft}^3} = 168.27 \text{ lb/ft}^3$$

$$\text{Mass of Material} = 0.2409 \text{ ft}^3 \cdot \frac{168.27 \text{ lbs}}{1 \text{ ft}^3} = 40.54 \text{ lbs}$$
