Plotting Points in the Coordinate Plane

The Coordinate Plane:

Each point in the coordinate plane is an ordered pair where it is (location on the x -axis, location on the y -axis). The point is located at the intersection of these two locations.

## Quadrants in the Coordinate Plane:

Example 1:
Name the ordered pair for each point and the quadrant in which the point lies.

A

Point $A$ is aligned with 0 on the $x$-axis and 3 on the $y$-axis. So, the coordinates of $A$ are $(0,3)$. Point A is not in a quadrant. It is on the y -axis.
$A(0,3)$; on the $y$-axis

## Example 2:

Name the ordered pair for each point and the quadrant in which the point lies.
B

Point $B$ is aligned with 2 on the $x$-axis and -4 on the $y$-axis. So, the coordinates of $B$ are $(2,-4)$. Point B is in quadrant IV.
$B(2,-4)$; Quadrant IV

## Example 3:

Name the ordered pair for each point and the quadrant in which the point lies.
C

Point $C$ is aligned with 2 on the $x$-axis and 4 on the $y$-axis. So, the coordinates of $C$ are $(2,4)$. Point C is in quadrant I .

## $C(2,4) ;$ Quadrant I

## Example 4:

Name the ordered pair for each point and the quadrant in which the point lies.
D

Point $D$ is aligned with -2 on the $x$-axis and -4 on the $y$-axis. So, the coordinates of $D$ are $(-2,-4)$. Point D is in quadrant III.

D(-2, -4); Quadrant III

## Example 5:

Name the ordered pair for each point and the quadrant in which the point lies.
E

Point E is aligned with -3 on the x -axis and 0 on the y -axis. So, the coordinates of D are $(-3,0)$. Point E is not in a quadrant. Point E lies on the x -axis.
$E(-3,0)$; on the $\boldsymbol{x}$-axis

## Example 6:

Name the ordered pair for each point and the quadrant in which the point lies.

Point F is aligned with 0 on the x -axis and -3 on the y -axis. So, the coordinates of F are $(0,-3)$. Point F is not in a quadrant. Point F is on the y -axis.
$F(0,-3)$; on the $\boldsymbol{y}$-axis

## Example 7:

Name the ordered pair for each point and the quadrant in which the point lies.

Point $G$ is aligned with 3 on the $x$-axis and 0 on the $y$-axis. So, the coordinates of $G$ are $(3,0)$. Point $G$ is not in a quadrant. Point $G$ lies on the $x$-axis.

```
G(3,0); on the }\boldsymbol{x}\mathrm{ -axis
```

## Example 8:

Name the ordered pair for each point and the quadrant in which the point lies.
H

Point H is aligned with -2 on the x -axis and 4 on the y -axis. So, the coordinates of H are $(-2,4)$. Point H is in quadrant II.

H(-2, 4); Quadrant II

## Example 9:

Plot the following points on the coordinate plane.
$L(4,3)$

This means we need to align $L$ with 4 on the $x$-axis and 3 on the $y$-axis.

|  |  |  |  |  | 6 | 6 |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  | 5 |  |  |  |  |  |  |
|  |  |  |  |  | 4 |  |  |  |  | $L$ |  |
|  |  |  |  |  | 3 |  |  |  |  |  |  |
|  |  |  |  |  | 2 |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
| -6 | -5 | -4 | -3 | -2 | -1 | 1 | 2 | 3 | 4 | 5 | 6 |
|  |  |  |  |  | -2 |  |  |  |  |  |  |
|  |  |  |  |  | -3 |  |  |  |  |  |  |
|  |  |  |  |  | -4 |  |  |  |  |  |  |

## Example 10:

Plot the following points on the coordinate plane.
$M(0,-2)$

This means we need to align $M$ with 0 on the $x$-axis and -2 on the $y$-axis.

|  |  |  |  |  | 6 | 6 |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | ---: | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  | 5 |  |  |  |  |  |  |
|  |  |  |  |  | 4 |  |  |  |  | $L$ |  |
|  |  |  |  |  | 3 |  |  |  |  |  |  |
|  |  |  |  |  | 2 |  |  |  |  |  |  |
| -6 | -5 | -4 | -3 | -2 | -1 | 1 | 2 | 3 | 4 | 5 | 6 |
|  |  |  |  |  | -2 | $M$ |  |  |  |  |  |
|  |  |  |  |  | -3 |  |  |  |  |  |  |
|  |  |  |  |  | -4 |  |  |  |  |  |  |
|  |  |  |  |  | -5 |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |

Example 11:
Plot the following points on the coordinate plane.
$N(-1,-5)$

This means we need to align N with -1 on the x -axis and -5 on the y -axis.

|  |  |  |  |  | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Example 12:

Plot the following points on the coordinate plane.
$P(-2,4)$

This means we need to align $P$ with -2 on the $x$-axis and 4 on the $y$-axis.

|  |  |  |  |  | $6 \uparrow$ |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $P$ | 5 |  |  |  |  |  |  |
|  |  |  |  |  | 4 |  |  |  |  | $L$ |  |
|  |  |  |  |  | 3 |  |  |  |  |  |  |
|  |  |  |  |  | 2 |  |  |  |  |  |  |
|  |  |  |  |  | 1 |  |  |  |  |  |  |
| -6 | -5 | -4 | -3 | -2 | -1 | 1 | 2 | 3 | 4 | 5 | 6 |
|  |  |  |  |  |  | $M$ |  |  |  |  |  |
|  |  |  |  |  | -3 |  |  |  |  |  |  |
|  |  |  |  |  | -4 |  |  |  |  |  |  |
|  |  |  |  |  | $N_{-5}$ |  |  |  |  |  |  |
|  |  |  |  |  | -6 |  |  |  |  |  |  |

Example 13:
Plot the following points on the coordinate plane.
$Q(3,-1)$

This means we need to align Q with 1 on the x -axis and -3 on the y -axis.

|  |  |  |  |  | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Example 14:

Plot the following points on the coordinate plane.
$R(4,0)$

This means we need to align $R$ with 4 on the $x$-axis and 0 on the $y$-axis.

|  |  |  |  |  | 6 |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | ---: | :--- | :--- | :--- | :--- | :--- | :--- |
