Definition of a Monomial: A monomial is a number, a variable, or a product of a number and one or more variables

**Monomials that are real numbers are called constants.

Expression	Monomial?	Reason
-5	yes	-5 is a real number and an example of a constant.

To simplify an expression involving monomials, write an equivalent expression in which:

- each base appears exactly once,
- there are no powers of powers, and
- all fractions are in simplest form.
